

WECO Pioneer 403MSR Air Cooled Synergic MIG Package Option 3

Pioneer 403 MSR is an industrial synergic 3 phase inverter power source with separated wire feeder for MIG/MAG short spray welding of different materials such as, carbon steels, stainless and aluminium.

Power Focus Function allows you to achieve higher penetration with lower risk of sticking increase welding speed, higher arc stability even with long stick-outs, lower costs of joint preparation and reduced volumes of bevels to be filled.

Power Root Arc allows you to perform an optimal first pass and high-quality welds which can be achieved in vertically down applications. Perfect for joining thin metal sheets and excellent for welding joints with large gaps.

HAC Control System allows the weld pool to be immediately balanced. It helps to almost remove spatter entirely in the initial welding stage, and the weld bead remains stable from beginning to end.
